

ABSTRACT OF THE DISCLOSURE

A luggage assembly includes an upright tubular member, upper and lower mounting seat members, upper and lower horizontal plate members, a luggage shell, and a pull handle unit. The upper and lower mounting seat members are mounted respectively on top and bottom end portions of the upright tubular member. The upper and lower horizontal plate members are mounted respectively on the upper and lower mounting seat members. The luggage shell is disposed to surround the upright tubular member, the mounting seat members and the horizontal plate members, and is formed with welts. The pull handle unit is disposed externally of the luggage shell, and includes a mounting seat fastened to the upper mounting seat member and the upper horizontal plate member, and a handle member pivotally retained on the mounting seat.
